THE GUIDED WAY TO COLONOSCOPY

Magnetic Balloon Technology

The solution for challenging looping

No setup costs

Compatible with standard colonoscopes

On demand usage and no need of preloading

Magnetic Balloon Technology

ENDORAIL BALLOON GUIDE IS A DISPOSABLE BALLOON CATHETER.

It can be inserted in the endoscope tool channel and filled with Ferromagnetic Fluid.

FERROMAGNETIC FLUID IS A WATER DISPERSION OF BIOCOMPATIBLE IRON POWDER.

It can be easily injected into the catheter to fill the balloon.

HANDPIECE CONTAINS A PERMANENT MAGNET.

Its design allows for easy modulation of the magnetic field intensity.

THE ENDORAIL CART STORES THE ENDORAIL HANDPIECE.

The compact design ensures it can be kept in the endoscopic room, ready for use.

Easy and quick procedure!

Sometimes solving loops is challenging.

Endorail Balloon Guide is inserted in the colonoscopy tool channel. The balloon is filled with Ferromagnetic Fluid.

Endorail Handpiece is placed over the patient's abdomen. The balloon is magnetically anchored.

Then endoscopist pulls and rotates the colonoscopy to solve the loop.

The balloon is deflated, removed and colonoscopy is completed with standard technique.
